Dear Hiring Professionals,

I am a Business Student with a passion for Computer Science; an ambitious engineer who loves to lead others — I am eager to impress and ready to learn.

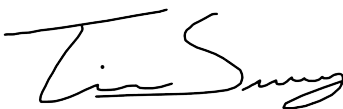

In the modern world of business, technology, and innovation, it is vital to foster interdisciplinary collaboration in order to outperform the competition and deliver the best product for customers. My academic and professional endeavors have equipped me with skills and experiences that support a strong technical background alongside various leadership positions.

By harnessing these pillars of passion, software development and managerial leadership, I will create value for your company by empowering those I work with, challenging our team to think outside the box, and reducing barriers to success. I've recently employed these same techniques at Aptify, where I collaborated with a diverse, segmented team to design and implement a new method of data authorization. In 3 short months, we drastically improved the ability to remotely access data, while inventing a more sophisticated authorization engine. The engine's framework is still being used today to power and run new applications.

I am thrilled to work with brilliant engineers, creative designers, and innovative business people as I thrive when surrounded with other driven individuals. I will further your company's mission by fulfilling an open position for an Associate Product or Project Manager. I am enthusiastic about bringing a vision to reality and will strive to surpass your expectations.

I look forward to our interview and cannot wait to join the team,

Sincerely yours,
